# eCATS Login Process – Honeywell Internal Users

Honeywell

This flow chart shows all the steps required for Honeywell Internal users to successfully login to the eCATS System

The Honeywell ID for Honeywell internal users is the EID (not the same as the eCATS Profile). In order to login to eCATS, Honeywell internal users need to use the Honeywell ID (EID and LDAP password).

The eCATS Profile is used to identify your eCATS system account. CARs are addressed by using eCATS Profiles (not the same as the Honeywell ID) . The eCATS Profile usually uses the format Exxxxxx for Honeywell internal users, but can have prefixes or suffixes (e.g. ENGE123456 or E123456PHX).

Steps (in order of use):

1. Honeywell ID (EID+LDAP password)
2. eCATS Profile
3. Honeywell ID to eCATS Profile association (just once)

The combination of EID + LDAP password is the same combination used to login to the Honeywell Intranet and other Honeywell Systems using the LDAP protocol.
